LE HOANG LONG

Backend Engineer • Distributed & Event-Driven Systems • Java - Go - Node.js - PHP

Da Nang, Vietnam · Open to remote · long.bk.khmt@gmail.com · +84 93 8186 100 · linkedin.com/in/long-lehoang

SUMMARY

Backend engineer with 6 years building large-scale, high-throughput distributed systems, with deep ownership of **event-driven integrations and data sync** for e-commerce and marketing platforms. At Flodesk, owns two-way sync of subscribers and order/commerce events across Shopify, Squarespace, Wix, ThriveCart, and Zapier — webhook ingestion, OAuth token lifecycles, consent compliance, and high-throughput import pipelines — and also designed and shipped the company's production remote **Model Context Protocol (MCP)** server (mcp.flodesk.com), exposing Flodesk analytics to LLM clients with OAuth 2.1 and full observability. Earlier, nearly four years of Java / Spring Boot microservices and serverless on AWS, including high-throughput banking data migration. AWS Solutions Architect and Terraform certified.

CORE SKILLS

Languages: Java, Go, TypeScript / Node.js, PHP, ReactJS

Distributed Systems: Event-driven architecture, webhooks, message queues (SQS, Kafka), idempotency & race-condition handling, high-throughput & high-availability design, performance optimization

MCP & Agent Tooling: MCP server design, OAuth 2.1 & Dynamic Client Registration, MCP tool & schema design, agentic / AI-assisted development workflows (Claude Code)

Data: PostgreSQL, MongoDB, Redis

Cloud & Observability: AWS, Kubernetes, Docker, Terraform, Prometheus, OpenTelemetry

EXPERIENCE

Backend Engineer

05/2025 – 07/2026

Flodesk · Da Nang, Vietnam

Email-marketing & e-commerce SaaS for creators and small businesses.

- **Own Flodesk's third-party integration platform** across six commerce/content integrations (Shopify, Squarespace, Wix, ThriveCart, Canva, Instagram) plus Zapier — OAuth (including an Ory Hydra authorization-server upgrade), webhook ingestion, token refresh, consent-compliant subscriber sync, and event handlers that trigger workflows on commerce events such as purchases and abandoned carts.
- **Eliminated ~200k redundant events/day** (SQS messages + Amplitude API calls) from the marketing-segment sync by adding checkpointing and dedup, and hardened the pipeline against order-paid race conditions, failing webhooks, and unrecoverable upstream errors (auto-disconnect).
- **Cut subscriber-import memory ~50%** and smoothed Squarespace sync load (a steady ~30 events / 5 min vs. a 6-hour bulk run); fixed stuck-job ordering and cleaned / bounced status handling, and migrated off the deprecated Profiles API to the Contacts API.
- **Designed and shipped Flodesk's remote MCP server** (TypeScript) from skeleton to production — OAuth 2.1 with Dynamic Client Registration, Streamable HTTP transport, per-session isolation, Redis rate limiting, and Prometheus metrics — exposing a growing suite of analytics tools to LLM clients, with the OAuth security hardening and tool-schema design behind it.
- **Built Dunning 2.0**, an event-driven payment-recovery flow (Recurly webhooks + a PostgreSQL state machine), and made Recurly throttling quota-aware to eliminate rate-limit alerts during renewal spikes.

Tech: *Go · TypeScript · Node.js · Webhooks · OAuth2 (Ory Hydra) · PostgreSQL · MongoDB · Redis · Recurly · AWS · Kubernetes · Prometheus · OpenTelemetry*

Technical Lead
01/2025 – 05/2025

FPT Software · Vietnam

Robotic Platform – Web Store (robotic module store for the DART platform).

- Built and maintained the DART robotic-module store, scaling its high-throughput Spring Boot APIs; optimized MongoDB queries and indexes to reduce response time and keep latency stable under load.
- Delivered end-to-end store features across Java 17/Spring Boot APIs and ReactJS UI, from API design and MongoDB data access through frontend integration and production deployment.

Tech: *Java 17 (Spring Boot) · ReactJS · MongoDB · AWS · Kubernetes · ArgoCD · SonarQube*

Senior Software Engineer
09/2022 – 12/2024

FPT Software · Vietnam

Healthcare System – serverless for medical records.

- Built durable batch-processing workflows for medical-record management, running entirely on AWS Lambda and completing each batch within 10 minutes.
- Automated Terraform infrastructure and Jenkins/SonarQube CI/CD, cutting deployment time 50%; supported secure authentication with Cognito JWT and mentored junior engineers on backend practices.

Tech: *Java 11 (Quarkus, AWS Lambda) · MySQL · MongoDB · Terraform · Cognito JWT · Jenkins*

Software Engineer
07/2021 – 08/2022

KMS Technology · Vietnam

Banking System – high-speed data migration.

- Optimized Spring Batch jobs after large-data testing, reducing a banking-migration run from more than 10 hours to approximately 1 hour for tables with millions of records and 30+ columns.
- Diagnosed and resolved a data-write race condition exposed by concurrent large-data testing, preserving migration correctness while improving throughput.
- Designed and implemented the high-speed migration tool with Spring Batch parallel processing and Kafka; partnered with business analysts on complex multi-table joins and mapping logic while balancing data consistency with throughput.

Tech: *Java 11 (Spring Boot, Spring Batch, Spring Data) · TiDB · Kafka · Docker*

Software Engineer
08/2020 – 06/2021

Cloud Nine Solutions · Vietnam

- Built RESTful APIs and optimized database queries on a Laravel / MySQL stack; foundational backend and system-design experience working alongside senior engineers.

Tech: *PHP (Laravel) · MySQL · Docker*

CERTIFICATIONS

AWS Certified Solutions Architect – Associate · HashiCorp Certified: Terraform Associate

EDUCATION

Ho Chi Minh University of Technology (Bach Khoa HCM)
08/2017 – 04/2022

B.Eng. in Computer Science · GPA 7.59
